

Online Workshop: Become a SepticSmart Homeowner

Maximize Your Systems Longevity!

Workshop Description

A well-maintained system is crucial to protecting your drinking water quality and the surrounding environment. Surveys have shown that many of us know little about septic systems. Do you know where your septic system is located? Should you be concerned with how often your septic tank is pumped out? Can your septic system affect the water quality of your well? Do you know how to maintain a healthy septic system?

This webinar will give a brief overview of wastewater biology, soils, components of a conventional system, operation & maintenance and innovative/alternative systems. There will be time at the end of the webinar for questions.

Thursday, September 21, 2023

7:00 pm - 8:00 pm

REGISTER:
